

On your iPod Touch/iPhone open up the *Settings* page, then find and click on the option for *Mail, Contacts, Calendars*.

Choose *Add Account*

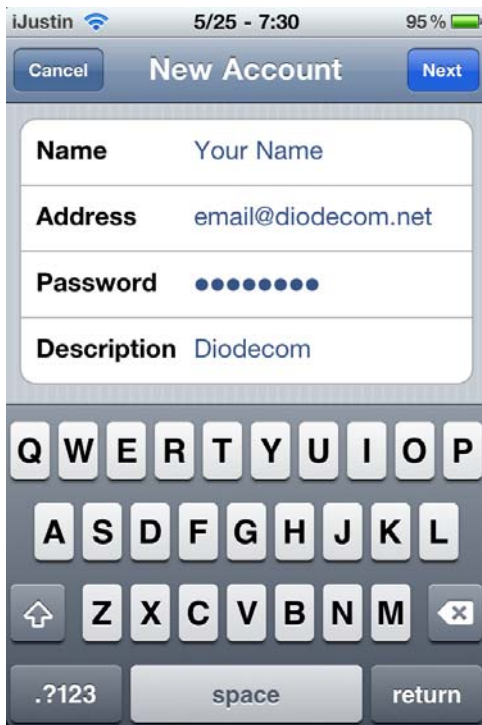

From the *Add Account* screen choose *Other*.

Choose *Add Mail Account*

Then enter your full name, your Diode email address and your email password and press *Next*

On the next screen click on the button that says *POP*.

For the *Incoming Mail Server* settings enter mail.diodecom.net for the *Host Name*, then put in your email username and password. For the *Outgoing Mail Server* setting enter smtp2.diodecom.net for the *Host Name* and then also put in your email username and password and then press the blue *Save* button in the upper left hand corner.

If a *Cannot Verify Server Identity* message comes up press *Continue*

If a *Cannot Connect Using SSL* error message comes up press *Yes*

Then click on the Home button on the iPod/iPhone and open up the *Mail* application to start reading and sending your messages.
